

Unit Testing Notes – Django Sticky Notes (Part 2)

What is tested

- Model: creation and `__str__` output.
- Form: valid/invalid scenarios.
- URLs: route resolution for core endpoints.
- Views: list/create/update/delete flows, templates, redirects.

How to run

Activate your virtualenv, install requirements, then run:

```
python manage.py test notes -v 2
```

Expected outcome

All tests should pass with an OK status. A test database is created and torn down automatically.
